

Collaborating Without Boundaries

In our fast paced world, businesses need the ability to change course quickly, collaborate globally, and streamline decision making. We have to collaborate with colleagues, partners, and customers around the globe at a moment's notice. In the past, building and maintaining those critical business relationships meant expensive face-to-face meetings, travel time and not to mention most importantly time spent away from home.

Enterprise HD video or Telepresence creates a live, face-to-face communication experience over the network that allows you to collaborate differently. It allows you to hold meetings, share content, communicate with employees remotely and consult with experts, all using the power of the network.

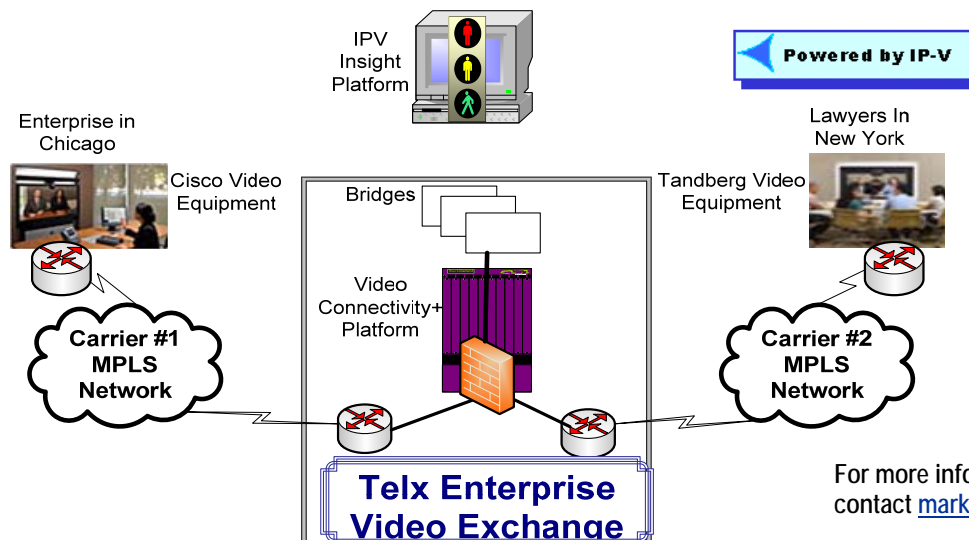

However, you want to make sure you can reach everyone you need to and securely. The Telx Video Exchange was developed to resolve the problems related to video communications such as mismatched QoS, addressing conflicts and asynchronous security.

The Telx Video Exchange provides:

- Video expertise and a platform to solve your video related problems:
 - Forms extranets that enable traffic to get securely from one network to another.
 - Enables protocol translation: SIP, H.323, H.320 thru hosted bridges.
 - Does standard based addressing, security and quality of service transliteration.
 - Provides a simple to read dashboard and easy to run diagnostics.
- A secure space for colocation of video equipment including gateways, bridges, gatekeepers and other video equipment.
- Interconnection to and between service providers in a secure carrier rich environment with QoS priority preservation end to end.
- Access to 24x7 personal to troubleshoot and resolve problems.

The Telx Video Exchange is a carrier neutral and video equipment neutral exchange. Located in 60 Hudson Street in New York City, the Telx Video Exchange is accessible from all over the United States. This Telx Video Exchange offer is powered by **IPV Gateways' Connectivity+ Platform**: a robust video telecommunications software platform that enables video conferencing and other applications.

In our rapidly changing world, businesses need the ability to collaborate globally. The Telx Video Exchange can assist you in achieving this.
